

Dustin James @ Magnolia Trace Farm (MS)

US Beltie News

Vice President Janie Tripp

Greetings from Brookhaven, Mississippi. I am Janie Tripp and I am excited to serve as your vice-president.

I have been a member of the Belted Galloway Society since 2009. My first exposure to the breed was while visiting my father in Texas. I saw a herd of Belties on a hill. I called my husband, Marty, and I told him that we needed to find out about the “oreo” cattle. I fell in love with them! In 2009, we purchased two heifers from Jack and Marilyn Pryor from Troup, Texas, and 15 animals in a dispersal sale from L.C. and D.J. Holstine from Anderson, Texas.

We established Magnolia Trace Farm in 2005 while we lived in Russia. My sister-in-law, Libby, managed the farm for us in those days. My backstory is that I am originally from Texas. And because of Marty’s career, we have lived in Louisiana, the country of Russia, and now Mississippi.

Our Magnolia Trace Farm is a small, family-owned farm in the small town of Brookhaven. Today, our farm is approximately 370 acres (150 owned, 220 leased)

and it has grown significantly since we bought our first cows. In addition to our herd of about 54 Belted Galloways, we also raise a herd of 20 registered Angus cattle and 50 commercial cattle. Several of our calves in these herds go to youth as 4-H and FFA projects to be shown at local and state fair competitions.

I remember our first trip to Louisville. It was amazing to see all the Belted Galloway cattle in one place. The Belted community is wonderful and we have learned so much from all the breeders. After seeing the show and watching all those beautiful cattle, I was bit by the “show bug.”

We later purchased our first show calves (a steer and heifer) from Sue Drew of Awendaw, South Carolina. Our five children are all grown so we asked a young lady in our local 4-H program to show them. And the rest is history! We have not missed a year since we started showing in 2010.

Off of the farm, we are very active in local and state livestock organizations. These organizations include Lincoln County 4-H, Lincoln County Junior Livestock Association, Mississippi Cattlemen's Beef Association, and the National Cattlemen's Beef Association.

About Classifieds

- ◆ **When interested parties are looking for Belted Galloway females the Society offices refer them to the beltie.org classifieds only!**
- ◆ **Your classified's required contact information — name, farm, location, phone and email.** All classified ads are automatically placed on beltie.org with a two-month limit on classified insertions. Photos are \$10 placed on beltie.org only.
- ◆ Email ads to executivedirector@beltie.org or by fax (608) 527-4811 or phone (608) 220-1091. We encourage members to submit ads the last two weeks of the month.
- ◆ **About bulls ...** Before advertising a young male be sure he is well conformed, tracks properly, has good legs and feet, and exhibits good weight gains. We should have data available on his birth weight, 205-day weaning weight, and yearling weight. If he's reached breeding age (around 18 months), it's definitely a plus to have his semen checked for quantity and motility, and uniform scrotal development (two normal sized testicles). Any data available should appear in your advertisement along with his birth date and the names of his sire and dam. **It is required that registration numbers be included on bulls advertised for sale in the classifieds.**

Calendar Reminders

2018 BELTED GALLOWAY SPRING COUNCIL MEETING

February 16-17, 2018. Chalet Landhaus Inn, New Glarus, Wisconsin. Meeting at 8:30 am. Contact Vic Eggleston (608) 220-1091 or executivedirector@beltie.org.

2018 NATIONAL BELTED GALLOWAY SALE THE FRYEBURG YOUTH SHOW

April 19-22, 2018. Fryeburg Fairgrounds, Fryeburg, Maine. Sale April 21, 2018. Contact Dustin James info@newenglandgallowaygroup.com or (207) 491-5980.

From the Past

In the February 1998 issue of the *US Beltie News*, the late A.R.C. Butson, Hamilton, Ontario, Canada chronicled the markings of 270 calves born in his Maple Brae herd. Twenty years later, white feet are still burdensome to the Belted Galloway breeder and his conclusions about white feet are still relevant.

Butson wrote: "In order to clarify the issue in my own Maple Brae herd, I have reviewed the markings of the last 270 calves born on my farms.

Total calves born	270
Calves with white feet	45
Calves with white on tail switch	5
Calves with an incomplete belt	7
Calves with extraneous white elsewhere	9

"An area of white on the hoof usually means there is some white hair on the foot.

"George Sproat of the famous Scottish Boreland herd once told me that the white-footed Belted Galloways were often the best animals.

"I have found that white feet can arise from perfectly marked ancestors of a five-generation pedigree. Once present, the white foot usually persists in the progeny.

"One of my exceptionally good cows has a small area of white below the level of the dewclaw. She has produced a total of nine calves, all with a white foot. If her calves are excluded, the percentage of white-footed calves born on my farms drops to 13%.

"From all these observations my conclusions are that incomplete belts and white in the tail switch are negligible problems, both that white feet remains a concern.

A.H. CHATFIELD JR. MEMORIAL SCHOLARSHIPS DUE

April 30, 2018. Contact Vic Eggleston (608) 220-1091 or executivedirector@beltie.org.

CLRC Long Serving Registrar Retires

Jim Washer, CLRC General Manager

Betty Foti announced her retirement from the Canadian Livestock Records Corporation effective January 26th, 2018. With over 43 years' service, she will be missed by all breeders, breed associations, staff and board members.

I take this opportunity to congratulate her on her retirement, and extend best wishes for many happy and healthy years on the next leg of her personal journey.

Betti can be very proud of her long and successful career and at having been a key part in making CLRC the respected brand it has become. Her knowledge and support to breeders, breed associations and the CLRC, will certainly be missed.

To accommodate a smooth transition of support to breeders and associations, Jenna Andrews who has been training under Betti and Lisa Hutt since April in the cattle department will assume Betti's position and continue to work closely with Lisa.

If you have any questions during this period of transition, please don't hesitate to contact me directly or to speak with the associated registrar.

Canadian Livestock Records Corporation
2417 Holly Lane
Ottawa, Ontario, CANADA K1V 0M7

Registrars

Jenna Andrews
jenna.andrews@clrc.ca
Phone 877-833-7110 or 613-731-7110, Ext. 310
Fax 613-731-0704

Lisa Hutt
lisa.hutt@clrc.ca
Phone 877-833-7110 or 613-731-7110, Ext. 312
Fax 613-731-0704

Office Hours

8:00 a.m. to 4:00 p.m. Eastern Time, Monday to Friday.

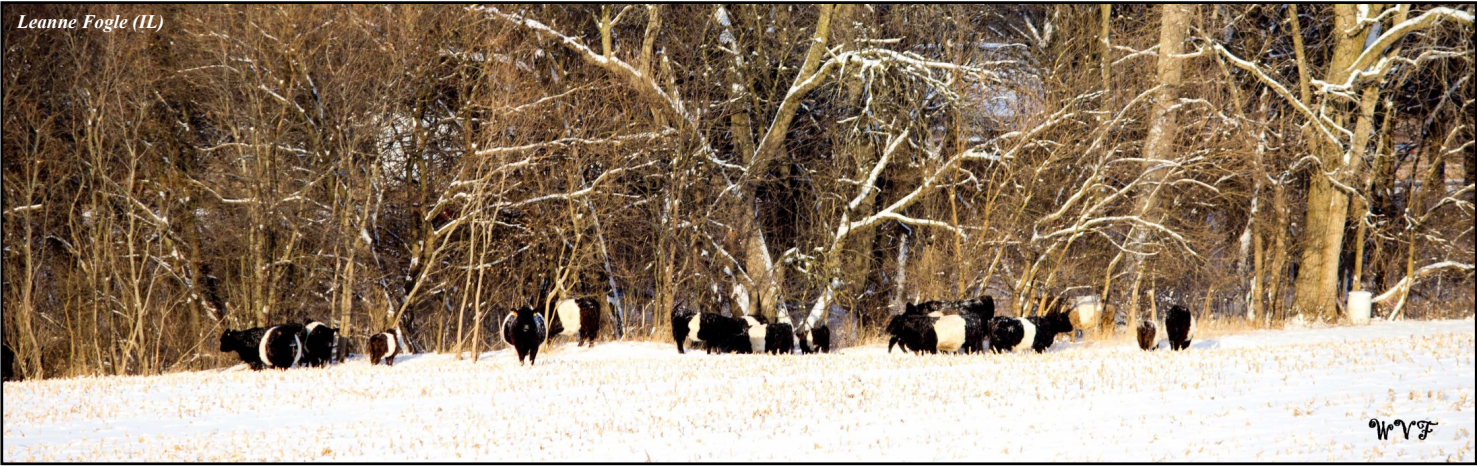

Lisa may also be reached from 4:00 to 6:00 p.m. from Monday to Wednesday and until 5:30 p.m. on Thursday. She is not in the office on Friday, but Jenna is still available to assist you. that day.

2018 Mandatory Testing Requirements

All bulls born on or after January 1, 2018 are required to be DNA and hypotrichosis tested before registration. Fees for the mandatory DNA and hypotrichosis testing are \$65. The Executive Director's office will generate the paperwork for samples to be submitted to UC Davis.

Bulls born on January 1, 2018 or after, may be registered with the CLRC for \$30 *after the DNA and hypotrichosis testing are completed*. Council reduced the registration fee to \$30 for all bulls born on January 1, 2018 or after to accommodate the mandatory testing.

The Executive Director's office will notify the breeder with the test results and an authorization for registration.

Understand the Effects of Cold Stress on Beef Cattle

Warren Rausch, SDSU Extension, courtesy of iGrow.org

Most beef producers understand that when the weather gets colder their cows need more energy to maintain their body condition. The questions are when do cows start experiencing cold stress and then how much more energy do they need?

When we're considering cold stress, we need to factor in both the actual temperature and the wind speed to determine the effective temperature. In Table 1 you can see wind speed can dramatically lower the effective temperature the cattle experience. Any kind of available protection, whether natural or man-made, can be very valuable in reducing the amount of wind chill.

Table 1. Wind Chill Temperature F°

Wind Speed	Air Temperature °F				
0 mph	-10°	0°	10°	20°	30°
5 mph	-16°	-6°	3°	13°	23°
10 mph	-21°	-11°	-1°	8°	18°
20 mph	-30°	-20°	-10°	0°	9°
30 mph	-46°	-36°	-27°	-16°	-6°

The second consideration is just exactly when does a cow begin to feel cold stress? The point of cold stress, or lower critical temperature, depends in large part on the amount of insulation provided by the hair coat. As shown in Table 2, that insulation value changes depending on the thickness of the haircoat and whether it is dry or wet.

Table 2. Lower Critical Temperatures for Beef Cattle

Coat Condition	Critical Temperature °F
Wet or Summer Coat	59°
Dry, Fall Coat	45°
Dry, Winter Coat	32°
Dry, Heavy Winter Coat	18°
Dry, Heavy Winter Coat	18°

As a general rule, for every degree that the effective temperature is below the lower critical temperature, the cow's energy needs increase by 1 percent. For instance if the effective temperature is 17 degrees F., the energy needs of a cow with a dry winter coat are about 15% higher than they would be under more moderate conditions. That energy requirement jumps up to about 40% higher under those conditions if the hair coat is completely wet or matted down with mud.

One of the ways that the cow responds to cold stress is by increasing voluntary feed intake. The animal's entire metabolism system increases in activity. Also, the passage rate of roughages through the rumen and digestive tract increases. These changes trigger an increase in the cow's appetite and voluntary intake. Some observed changes in intake based on temperature are shown in the Table 3.

Table 3. Daily Dry Matter Intake of Beef Cows Based on Temperatures

Dry Matter Intake Based on Temperatures							
Temp. °F	<5°	5-22°	22-41°	41-59°	59-77°	77-95°	>95°
Intake Ratio	116	107	105	103	102	90	65

There are some management considerations that we need to keep in mind regarding changes in feed intake in response to cold stress and the cow's need for more energy.

- Make sure that water is available. If water available is restricted, feed intake will be reduced.
- If the feed availability is limited either by snow cover or access to hay feeders, the cattle may not have the opportunity to eat as much as their appetite would dictate.
- Be careful providing larger amounts of high concentrate feeds. Rapid diet changes could cause significant digestive upsets.

It's important to remember that cattle can adapt to short term weather changes relatively well without a significant impact on performance. A cow can deal with a few cold, miserable days without suffering long-term effects. However, ignoring the energy costs of long-term cold stress greatly increases the risk of problems down the road during calving and subsequent re-breeding performance. Any steps that we can take to lower the cold stress the cows have to contend with, such as providing wind and weather protection, help reduce her maintenance requirements.

Committees

President Dawson Masters

During December, I communicated with various individuals and asking them to serve on committees on behalf of the Belted Galloway Society.

Committees meet via teleconference or by email during the year as needed. Committees who have been actively working on projects report to Council at the Spring Council Meeting and the Annual Meeting.

Council ultimately makes all voting decisions based upon the recommendations of the various committees.

I wish to thank those individuals who has volunteered their time generously to serve our breed.

A.H. Chatfield Jr. Memorial Scholarship

The 2018 A. H. Chatfield, Jr., Memorial Scholarship applications are available. Three \$1000 scholarships are awarded annually. Forms may be requested from Executive Director, Victor Eggleston, Phone (608) 220-1091; email: executivedirector@beltie.org or may be accessed at www.beltie.org.

The recipients must meet the following criteria:

1. Be a member of the Belted Galloway Junior Association, the Belted Galloway Society Inc., or be a child or grandchild of a BGS member;
2. Be either a graduating high school senior or a college student, or be enrolled in an advanced education program;
3. Submit the completed application form along with a written essay explaining why you are the best possible candidate for the scholarship. Added consideration will be given to applicants enrolled in animal/agriculture-related courses, and those experienced with Belted Galloway cattle. Extracurricular and out-of-school activities will also be taken into consideration.

Completed applications must be submitted to Executive Director, Victor Eggleston, N8603 Zentner Rd., New Glarus, WI 53574, and must be postmarked by April 30, 2018.

Lease Agreements

1. A lease agreement must be on file with the CLRC by July 1, 2018 for animals to be shown under the lessee's name.
2. Exhibitor points will be awarded to the lessee of the animal.
3. If animal is shown under the lessee one day of a multiple day show, the animal must continue to be exhibited under the lessee for the duration of the entire show. The lease cannot be terminated halfway through an event. The owner of the leased animal may use the animal for group classes.
